Open-ED is a very simple and cost-effective open source Genesis/Megadrive cartridge.

The cartridge does not have its own processor or FPGA, it is built in the old school style using only memory and discrete logic.

Cartridge design uses an absolute minimum of inexpensive components.

Made in Ukraine

SYSTEM REQUIREMENTS:

CPU: Motorola 68000 @ 7.6Mhz

RAM: 64KB

GPU: YM7101 VDP with 64KB of VRAM Sound: YM2612 with Z80 co-processor
